

Nitro Max

Soil Amendment
"It really works"

These results were after using just 8 drops of Nitro Max mixed with 4 gallons of water and applied only one time when the plants were approximately 6" to 9" tall. The photos are shown after 12 weeks of growth. The tomato plants grew to over 9 feet (3 meters) high and with much fruit. No other fertilizer was used.

The microbial action enhances the nitrogen that is already in the soil and air. This allows you to reduce the amount of your regular fertilizer and still increase your yields. This product can be used in organic farming as well.
